

ANSI version

Application

Globe or angle valve for cryogenic applications · Easy to service due to top-entry design

Valve size	NPS 1 to 6
Pressure rating	Class 150 to 600
Temperature range	−425 to +149 °F · −254 to +65 °C

The Type 3248 Cryogenic Valve is specially designed to meet the requirements of cryogenic applications.

- Standard metal bellows to meet strict emission requirements
- Minimized heat leak thanks to the use of a bellows seal and a cryogenic extension bonnet
- Globe or angle-style valve body
- Installation in vacuum-insulated pipelines, air separation plants, and peripheral plants made possible by a cover plate on the cryogenic extension bonnet
- Valve maintenance possible without removing it from the pipeline
- Top entry through the cryogenic extension bonnet allows easy access to the seat, plug, and bellows after removal of the actuator
- The C_v coefficients can be modified in wide ranges by replacing the seat and valve plug

Versions

Standard version · Temperature range from −320 to +149 °F (−196 to +65 °C) · Stem sealed by metal bellows and self-adjusting V-ring packing made of pure PTFE or PTFE/carbon

- **Type 3248-1** · With Type 3271 Pneumatic Actuator, 175 to 2800 cm² effective diaphragm area
- **Type 3248-7** · With Type 3277 Pneumatic Actuator for integral positioner attachment, 175 to 750 cm² effective diaphragm area

Further versions

- Temperature range from −320 to −425 °F (−196 to −254 °C)
- Temperatures above 149 °F (65 °C) · On request
- Free of oil and grease for oxygen service
- Version for ultrapure gas
- Pipe jacketing for installation in vacuum-insulated plant components
- Welding-neck ends on request
- Pneumatic actuator with additional handwheel
- Cryogenic valves according to DIN EN standard in DN 25 to 150, PN 16 to 100, see Data Sheet ► T 8093

Principle of operation

The medium flows through the cryogenic valve in the direction indicated by the arrow. The position of the valve plug (5) in relation to the seat (4) determines the flow rate. The metal bellows seal (37) guarantees that the medium has no direct contact with the V-ring packing (15). The packing to seal the stem to the atmosphere is self-adjusting. The stem seal can be checked at any time for leakage by removing the screw plug at the test connection (42).

Installation

We recommend mounting the valve at an angle between 15 and 25° to the horizontal plane. Please contact SAMSON for smaller mounting angles as additional measures are required in this case. Avoid attaching the bracket or support in the area around bellows nut (41) (refer to the Mounting and Operating Instructions ► EB 8093).

The medium must flow through the valve in the direction indicated by the arrow on the valve body (1).

Fail-safe position

Depending on how the springs are arranged in the pneumatic actuator (see Data Sheet ► T 8310-1), the valve has two different fail-safe positions effective upon air supply failure:

- **Actuator stem extends (FA)**
When the air supply fails, the spring force moves the stem downward causing the valve to close.
- **Actuator stem retracts (FE)**
When the air supply fails, the spring force moves the stem upwards causing the valve to open.

Differential pressures

Permissible differential pressures are listed in Information Sheet ► T 8000-4:

- Valves in Class 150 to 300 according to Tables 4.1 to 4.3
- Class 600 according to Tables 5.1 to 5.3

Fig. 3: Bonnet and yoke for Class 600
